

# TCL/TK

## Conduite d'un système de production

# Systeme de Production du Telescope B. Lyot

## *Etat de l'Art : TCL/TK*

- 1. John Ousterhout 1980.**
- 2. Langage robuste, extensible**
- 3. Simple et générique**
- 4. Faciliter d'intégration « Glue Together » les extensions**
- 5. Extension de composants graphiques utilisateurs puissante**
- 6. Pérennité : ActiveState**

# *Le TCL*

- 1. Langage de script**
- 2. Grammaire et commandes extensibles**
- 3. Gestion automatique de la mémoire, no pointeurs**
- 4. Programmation séquentielle**
- 5. Langage de colle pour faire tenir un ensemble d'applications ensemble**
- 6. Langage discret**

```
Ffafs fdfqdf

f
```

# *Le TK*

## 1. Tool Kit

## 2. Extension graphique de TCL

- Widgets

## 3. Programmation événementielle

- Event-Driven

# *TCL/TK*

- 1. Open Source**
- 2. Lisibilité (Maintenance, Debug)**
- 3. Grand nombre d'extensions**
- 4. Espace de Nommage**
- 5. Programmation en un minimum de lignes**

# *Multi-Plateforme*

```
wm title . "Vive Tcl/Tk !"  
label .texte -relief groove -  
text "Hello World !" -width  
30  
button .ok -text "OK" -  
command {exit}  
pack .texte .ok -side top
```

# *Programmation TCL/TK*

## **1. TCL**

- **Tout est** *< Chaîne de Caractères >*

*Structure de Données -> Liste de STRINGS only !*

## **2. TK**

- **Concepts concurrentiels**

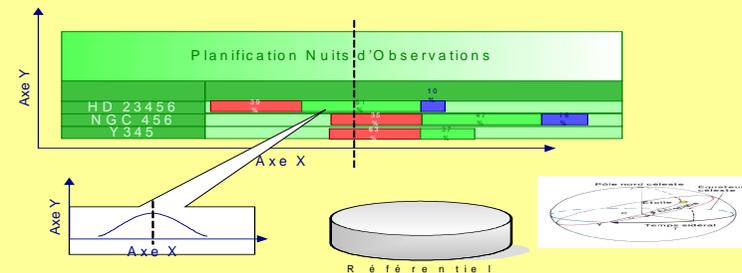

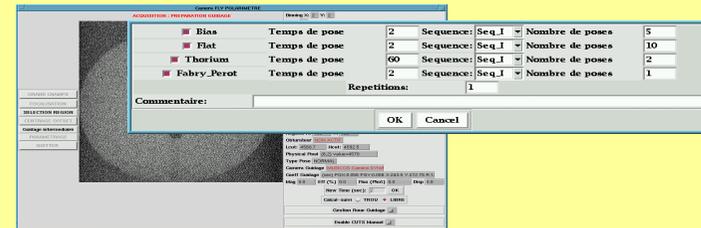

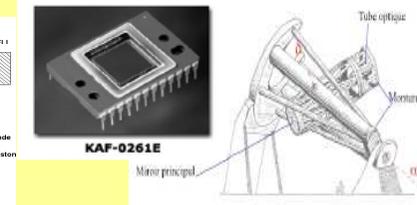

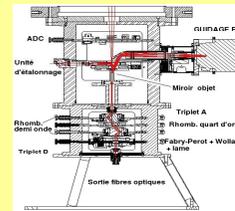

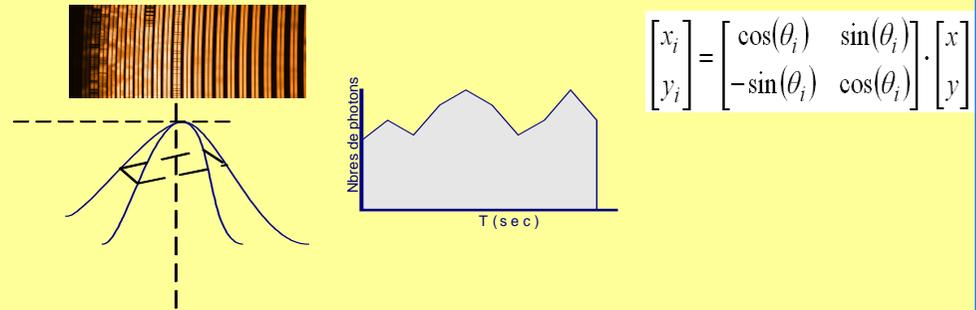

*Events-Driven*

- **Widgets**

*Graphic User Interface*

# Conception et développement des contrôles-commandes Instrumentations

- Agents de traitements  
Transformation ou calculs sur les flux de données.
- Agents réactifs  
Evènements processus contrôl-commande.
- Agents graphiques  
Evènements humain
- Agents cognitifs/raisonnements  
Inférence sur une base de connaissance (Planification Nuits d'observation).

## Programmation Event-Driven

Execute TCL SCRIPT

### TAKE EVENT FROM QUEUE

Callback Tcl\_DoWhenIdle (after idle)

Tcl\_CreateTimerHandler (after N)

Tcl\_CreateChannelHandler (file event)

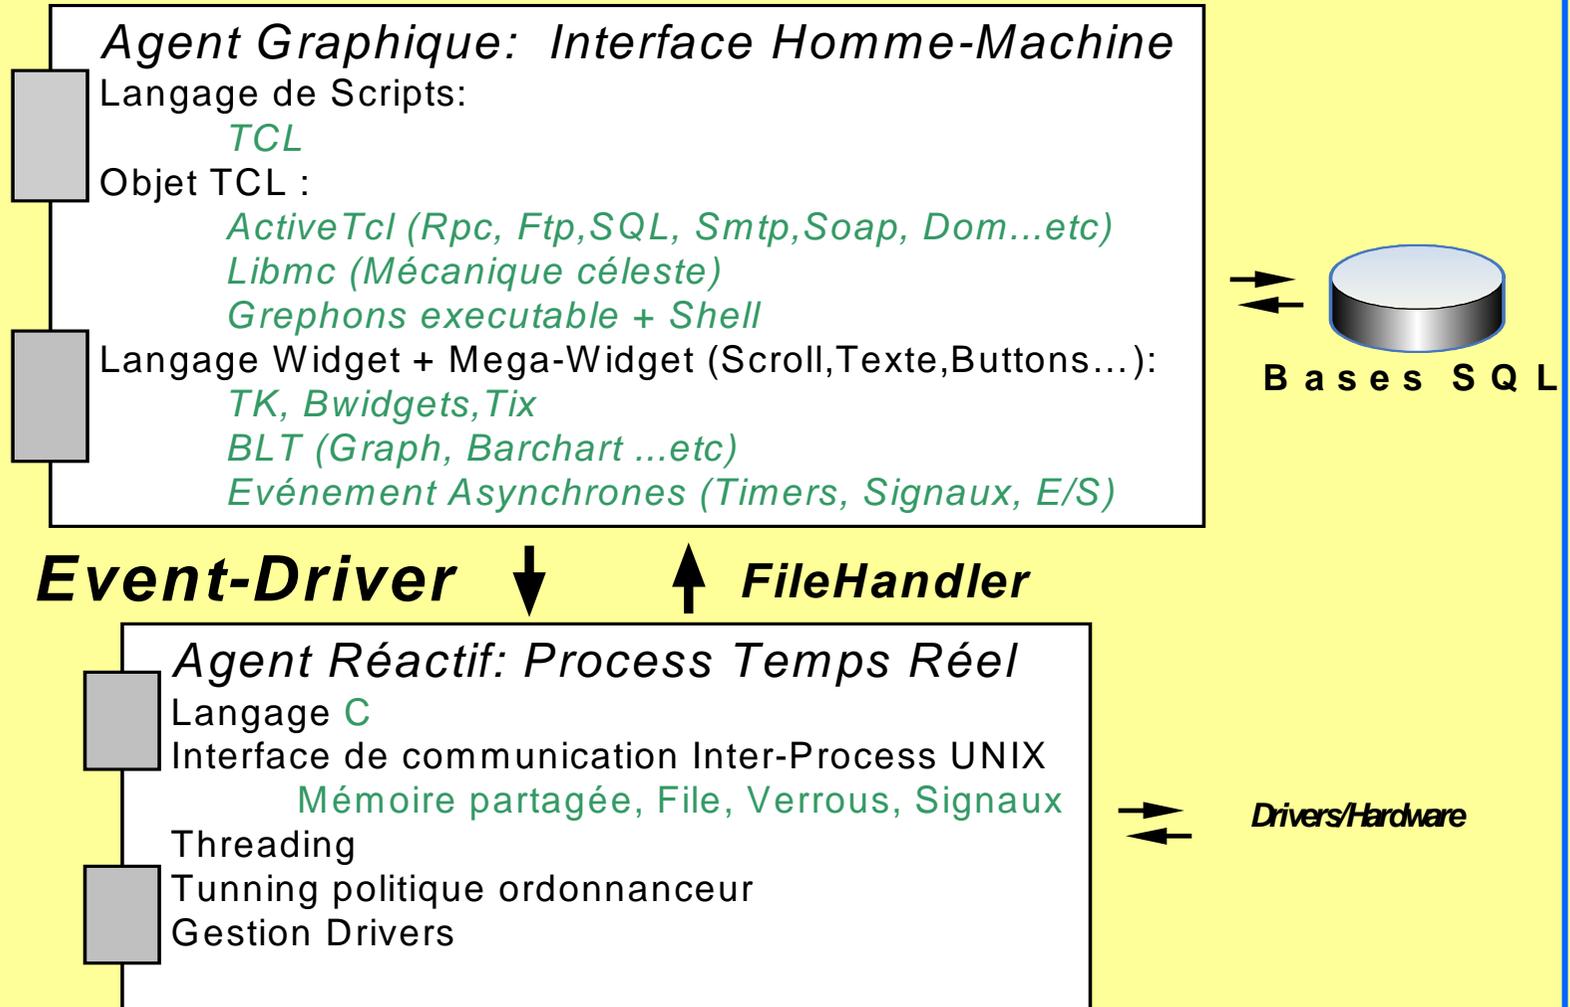

Tk\_CreateEventHandler | (bind, -command ..etc)

Other callbacks (Tk\_CreateGenericHandler,  
Tk\_CreateErrorHandler, Tcl\_EventuallyFree, etc.)

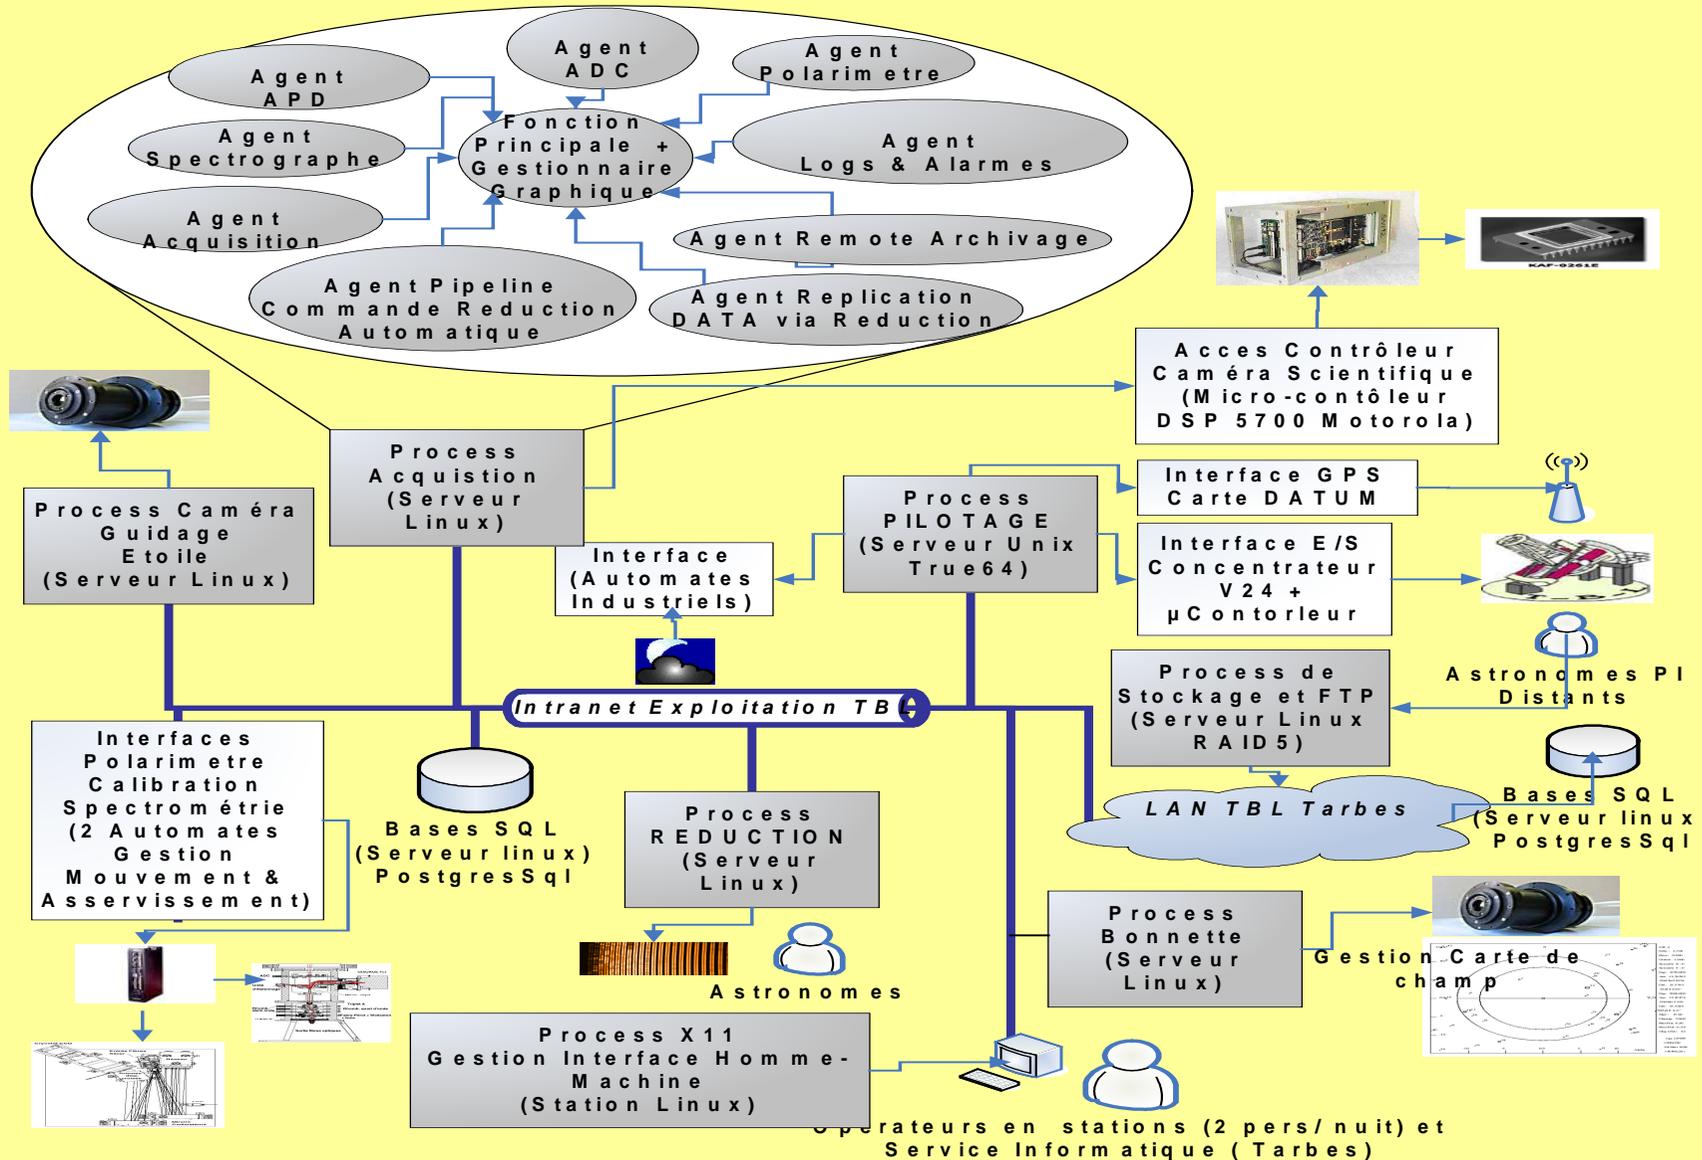

Execute script

Lookup  
corresponding  
script

# Event-Driven: Synchronisation

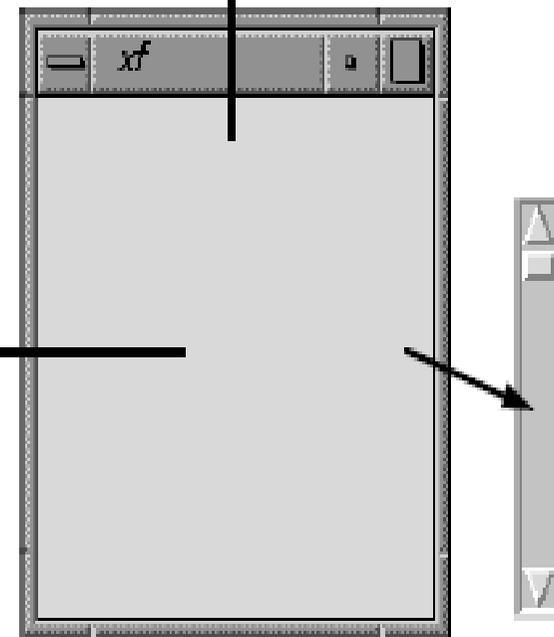

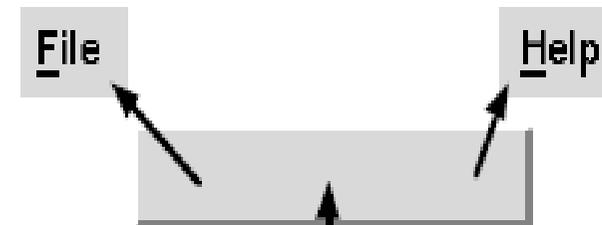

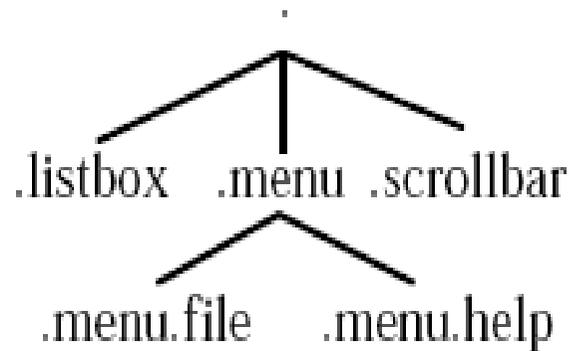

# Diagramme structurel (Phase3 Observation)

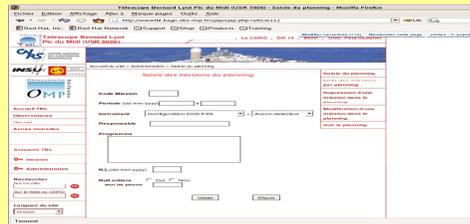

# Widgets: Graphical User Interface

## La hiérarchie de widgets

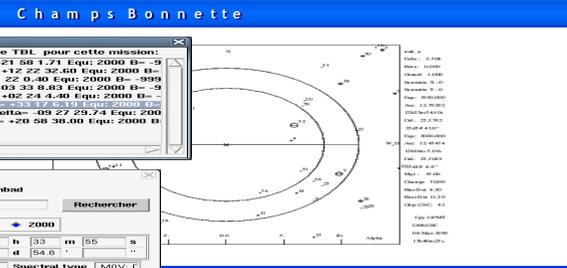

# Outils graphiques TK liés à l'exploitation
